

# Ecology Consultancy

Whilst wind energy undoubtedly brings lots of benefits to the UK, many new proposals are obstructed by local issues including impacts on ecology and biodiversity. If the appropriate surveys have not been carried out to accepted good practice standards and presented in a professional manner, proposals can be rejected at the planning stage with consequent effects on budgets and timescales. The Ecology Consultancy provides professional services to help energy companies negotiate these potentially complex issues.

The Ecology Consultancy is a long established and highly experienced consultancy with over 30 ecologists across four offices in London, Norfolk, Sussex and Scotland. We offer the full range of ecology services to ensure that your wind farm proposal is sensitive and robust.

Our project experience includes over twenty proposals in Cambridgeshire, Norfolk, Suffolk and Essex for companies including RWE npower renewables, Arcus Renewables, Warwick Energy, Ecotricity and Stamford Renewables.

Our in-house experts and state of the art equipment will ensure your ecology needs are delivered to the highest standards at a competitive rate.

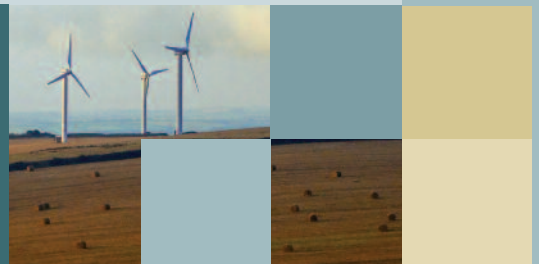

## Delivering ecological expertise for your wind farm projects

### Our specialist services include:

- Free no obligation consultation to discuss the project and CPD sessions
- Pre-construction feasibility studies
- Full suite of ecology surveys
- Automated bat surveys (ten devices)
- Protected species licence holders
- Statistical expertise including collision risk modelling
- Environmental statement ecology chapter
- Novel and robust mitigation strategies
- Expert witness
- Post construction monitoring
